**STUDIES OF BLAST  
FURNACE  
PHENOMENA**

STUDIES  
OF  
BLAST FURNACE PHENOMENA.

BY  
M. L. GRUNER,  
PRESIDENT OF THE GENERAL COUNCIL OF MINES OF FRANCE,  
AND LATELY PROFESSOR OF METALLURGY AT THE ÉCOLE DES MINES.

*TRANSLATED, WITH THE AUTHOR'S SANCTION,  
WITH AN APPENDIX,*

By L. D. B. GORDON, F.R.S.E., F.G.S.,  
EMERITUS SENIUS PROFESSOR OF CIVIL ENGINEERING AND MECHANICS IN THE UNIVERSITY OF  
GLASGOW, FORMERLY A STUDENT OF THE ROYAL SCHOOL OF MINES, OF FREIBERG, IN  
SAXONY; HONORARY MEMBER OF THE INSTITUTION OF ENGINEERS AND SHIP-  
BUILDERS IN SCOTLAND; MEMBER OF THE IRON AND STEEL INSTITUTE.

PHILADELPHIA:  
HENRY CAREY BAIRD,  
INDUSTRIAL PUBLISHER,  
408 WALNUT STREET.  
1874.

## CONTENTS.

	PAGE
LETTER TO ISAAC LOWTHIAN BELL, ESQ. . . . .	xi
TRANSLATOR'S PREFACE . . . . .	xiii
SECTION I.	
Recent Modifications in the Régime of Blast Furnaces . . . . .	17
SECTION II.	
Successive Enlargements of Blast Furnaces . . . . .	18
SECTION III.	
Principal Reactions in Blast Furnaces . . . . .	24
SECTION IV.	
Quantities of Caloric absorbed and given off in Blast Furnaces . . . . .	26
SECTION V.	
The Economical Working of the Furnaces varies with the ratio of $\frac{\text{CO}^2}{\text{CO}}$ in the Gases . . . . .	29
SECTION VI.	
The ratio $\frac{\text{CO}^2}{\text{CO}}$ is the Measure or Index of the Economical Working of Blast Furnaces . . . . .	33

## SECTION VII.

	PAGE
Weight and Composition of the Escaping Gases—Construction of Analytical Formulas of Calculation . . . . .	34

## SECTION VIII.

Agreement of the Formulas with the Complete Analysis . . . . .	38
--	----

## SECTION IX.

A Method of taking Specimens, securing a Mean of all the Gases during several hours . . . . .	42
---	----

## SECTION X.

Determination of the Caloric <i>consumed</i> in Blast Furnaces . . . . .	46
--	----

## SECTION XI.

Caloric <i>absorbed</i> by the reduction of the Ores and the fusion of the Pig-Iron . . . . .	47
---	----

## SECTION XII.

Caloric absorbed by the fusion of the Slag, the decomposition of the Limestone, etc. . . . .	52
--	----

## SECTION XIII.

Sensible Heat carried off by the Gases . . . . .	54
--	----

## SECTION XIV.

Caloric lost by Radiation from the Walls of Furnace, etc. . . . .	55
---	----

## SECTION XV.

Determination of the Caloric <i>received</i> by a Blast Furnace, solely derived from transformation of Carbon into a Mixture of CO <sup>2</sup> and CO . . . . .	56
--	----

CONTENTS.

vii

SECTION XVI.

	PAGE
<i>First Example</i> —Clarence Furnace, 1853—gives 0·40 of the Calorific Power of Coke consumed . . . . .	59

SECTION XVII.

<i>Second Example</i> —Clarence, 1866—gives 0·48 of the Calorific Power of Coke consumed . . . . .	63
--	----

SECTION XVIII.

<i>Third Example</i> —Ormesby Furnace, 1867—gives 0·44 of the Calorific Power of Coke consumed . . . . .	67
--	----

SECTION XIX.

<i>Fourth Example</i> —Consett Furnace—gives 0·45 of Calorific power of Coke . . . . .	70
--	----

SECTION XX.

<i>Fifth Example</i> —Consett Furnace—gives 0·47 of the Calorific Power of Coke . . . . .	73
---	----

SECTION XXI.

Consequences derived from the preceding Examples—Synoptical Table of Results . . . . .	77
--	----

SECTION XXII.

Influence of Extra-Slow Working . . . . .	86
---	----

SECTION XXIII.

Influence of great Height and Capacity . . . . .	88
--	----

SECTION XXIV.

Beyond a certain height the Temperature of the escaping Gases does not diminish by reason of the dissociation of the Oxide of Carbon . . . . .	93
--	----

## SECTION XXV.

	PAGE
Influence of Highly-heated Blast . . . . .	101

## SECTION XXVI.

Conclusions . . . . .	116
-----------------------	-----

## SECTION XXVII.

Application of the New Method of Analysis to a French Blast Furnace—gives 0.48 of Calorific effect of Coke consumed . . .	118
--	-----

## SECTION XXVIII.

Another Example of French Blast Furnaces . . . . .	128
--	-----

## APPENDIX.

	PAGE
NOTE I. On taking Specimens of the Escaping Gases . . . . .	135
NOTE II. To explain what is meant by "Strengflüssige Erzen," "Minerais refractaire." Plattner's Experiments on the Tempera- ture of Formation of Slags . . . . .	136
NOTE III. On Ebelmen's assertion that it takes twice as much Coke as Charcoal to smelt the same quantity and quality of Pig-Iron . . . . .	138
NOTE IV. Charcoal decomposes CO <sup>2</sup> more rapidly than hard or soft Coke does . . . . .	139
NOTE V. A Brief History of the Theory of the Blast Furnace, and of most recent practical results . . . . .	140
Lampadius—1837-38 . . . . .	140
Karsten—1839 . . . . .	141
Bunsen first analyzed Blast-Furnace Gases, and drew conse- quences therefrom—1838 . . . . .	143
Ebelmen followed in the same course—1840-42 . . . . .	144
State of Calorimetric determination of the Caloric of combustion in 1839 . . . . .	144
Before analyses of Gases were made, viz., 1811, they were vari- ously applied in France . . . . .	145
Patent of Mr. Palmer Budd—1860 . . . . .	145
Percy's "Metallurgy of Iron and Steel," published 1863-64 . . . . .	147
Schinz's Work, published 1868, was the first which took the Caloric Phenomena of the Blast Furnace into consideration . . . . .	148
Schinz's Experiments on Reduction . . . . .	148

	PAGE
Lowthian Bell's Studies of Blast Furnace Phenomena began to be published in 1869 . . . . .	152
Experiments on Reduction by Furnace Gases directly applied .	154
On the presence of Alkaline Cyanides . . . . .	157
On Dissociation of CO . . . . .	159
On the Behavior of Limestone . . . . .	164
On Influence of Superheated Blast . . . . .	168
NOTE VI. Useful Tables and Memoranda for Calculations of Blast Furnace Phenomena . . . . .	175
INDEX. . . . .	181
