PREFACE

For the past ten years it has been a part of the writer's duties to give instruction in microscopical technique, and it has seemed to him that there is need for a series of practical exercises which will serve to guide the beginner through the maze of present-day methods, with the greatest economy of time, by drilling him in a few which are thoroughly fundamental and standard. The book is intended primarily for the beginner and gives more attention to the details of procedure than to discriminations between reagents or the review of special processes. The student is told what to do with his material, step by step, and why he does it; at what stages he is likely to encounter difficulties and how to avoid them; if his preparation is defective, what the probable cause is and the remedy. In short, the book attempts to familiarize the student with the little "tricks" of technique which are commonly left out of books on methods but which mean everything in securing good results.

A very brief, non-technical account of the principles of the microscope is inserted (Appendix A) with the idea of giving the student just enough of the theoretical side of microscopy to enable him to get satisfactory results from his microscope. The microscope is so ably treated in the excellent works of Gage (*The Microscope*) and Carpenter (*The Microscope and Its Revelations*) that the writer feels himself absolved from any further responsibility in this matter.

The aim of the entire book is to be practical: to omit everything that is not essential; and, above all, to give definite statements about things. Appended to each chapter is a series of *memoranda* which serve to supply additional information that is more or less pertinent without obscuring the main features of the method under consideration.

In Appendix B the formulae for a number of the most widely used reagents are given with comments upon their uses and manipulation. Following this (Appendix C) is a concise table of a large

number of tissues and organs with directions for properly preparing them for microscopical study.

Inasmuch as every experienced worker has his own "best" method for the preparation of almost any tissue, it is manifestly impossible to give all "best methods" in such a table. The writer believes, however, that the student will find the methods recommended all good ones which will yield satisfactory results.

In Appendix D some directions are given for collecting and preparing material for an elementary course in zoology.

It is hoped that the volume will prove of use: (1) as a class textbook; (2) as a guide to the independent individual worker (teacher, physician, college or medical student, or novice); (3) as a reference book for teachers, in the preparation of material for courses in elementary zoology, histology, or embryology.

In the matter of expressing his obligations the writer is at a loss to know just what to do. Many of the methods in microscopical technique have been handed down tradition-wise from one worker to another until their origin is unknown; they are the accumulated experiences of several generations of workers. Furthermore, many points have been absorbed, as it were, by the writer, from fellow-workers in the Universities of Chicago, Nebraska, and Cincinnati, respectively; consequently the obligation cannot be specifically expressed. Where the name of the originator of a method is known, due credit has been given. The books to which the author is most heavily indebted are the volumes of Gage, and Carpenter, already mentioned, Lee's *Microtome's Vade-Mecum*, Whitman's *Methods in Microscopical Anatomy and Embryology*, Hardesty's *Neurological Technique*, Foster and Balfour's *Elements of Embryology*, Minot's *Laboratory Text-book of Embryology*, Huber's translation of the Böhm-Davidoff *Text-book of Histology*, Stöhr's *Text-book of Histology*, Mallory and Wright's *Pathological Technique*, Bausch's *Manipulation of the Microscope*, and the *Journal of Applied Microscopy*. Grateful acknowledgment is also made to the various manufacturers of microscopical instruments and appliances for the loan of most of the cuts which have been used in this volume.

M. F. G.

CONTENTS

| | PAGE |
|--|------|
| INTRODUCTORY | 1 |
| Apparatus and Supplies Required, 1; General Rules, 5. | |
| CHAPTER I. PREPARATION OF REAGENTS | 7 |
| Practical Exercise, 7; Memoranda, 13. | |
| CHAPTER II. GENERAL STATEMENT OF METHODS | 15 |
| Killing, Fixing and Hardening, 16; Washing, 17; Dehydrating, 18; Preserving, 18; Staining, 19; Clearing, 21; Mounting, 22; Imbedding, 22; Affixing Sections, 23; Decolorizing, 24; Bleaching, 24; Corrosion, 24; Decalcification and Desilicidation, 24; Injection 25; Isolation of Histological Elements, 25; Normal or Indifferent Fluids, 25; General Scheme for Mounting Whole Objects (<i>In Toto</i> Preparations) or Sections, 26. | |
| CHAPTER III. KILLING AND FIXING | 27 |
| Cautions, 27; Alcohol Fixation, 28; Fixing with Gilson's Mercuronitric Mixture, 28; Fixing with Erlicki's Fluid, 29; Formalin as a Fixing Reagent, 29; Memoranda, 30. | |
| CHAPTER IV. SIMPLE SECTION METHODS | 33 |
| Free-Hand Section Cutting, 33; Memoranda, 34. | |
| CHAPTER V. THE PARAFFIN METHOD; IMBEDDING AND SECTIONING . | 37 |
| The Method, 37; Memoranda, 43; Tabular Statement of Difficulties Likely to Be Encountered in Sectioning in Paraffin and the Probable Remedy, 46. | |
| CHAPTER VI. THE PARAFFIN METHOD; STAINING AND MOUNTING . . | 49 |
| Staining with Hematoxylin, 49; Double Staining in Hematoxylin and Eosin, 51; Double Staining in Carmine and Lyons Blue, 51; Staining with Heidenhain's Iron-Alum Hematoxylin, 52; Bordeaux Red and Iron-Hematoxylin, 53; Staining in Bulk before Sectioning, 54; Paraffin Method for Delicate Objects, 54; Memoranda, 55. | |
| CHAPTER VII. THE CELLOIDIN METHOD | 59 |
| The Method, 59; Staining Celloidin Sections in Hematoxylin and Eosin, 62; Memoranda, 62. | |
| CHAPTER VIII. THE FREEZING METHOD | 67 |
| The Method, 67; Memoranda, 68. | |
| CHAPTER IX. METALLIC SUBSTANCES FOR COLOR DIFFERENTIATION . | 71 |
| A Golgi Method for Nerve Cells and Their Ramifications, 71; Memoranda, 72; Silver Nitrate Method for Nerve, 73; Gold Chloride Method for Nerve Endings, 74. | |

| | |
|---|------------|
| CHAPTER X. ISOLATION OF HISTOLOGICAL ELEMENTS. MINUTE DISSECTIONS | 75 |
| Dissociation by Means of Formaldehyde, 75; Isolation of Muscle Fibers by Maceration and Teasing, 75; Maceration by Means of Hertwig's Fluid, 76; Minute Dissection and Mounting of Various Parts of Insects, 77; Memoranda, 78. | |
| CHAPTER XI. TOOTH, BONE, AND OTHER HARD OBJECTS | 79 |
| Sectioning Decalcified Tooth, 79; Sectioning Decalcified Bone, 79; Sectioning Bone by Grinding, 80; Memoranda, 80. | |
| CHAPTER XII. INJECTION OF BLOOD AND LYMPH VESSELS | 81 |
| Red Injection Mass, 81; Blue Injection Mass, 81; Injection with a Syringe, 81; Memoranda, 84. | |
| CHAPTER XIII. OBJECTS OF GENERAL INTEREST: CELL-MAKING, FLUID MOUNTS, "IN TOTO" PREPARATIONS, ETC. | 87 |
| Turning Cells, 87; Mounting in Glycerin (Water Mites, Transparent Larvae), 88; Killing and Mounting Hydra, 89; Mounting in Glycerin Jelly (Small Crustacea, etc.), 89; Mounting in Balsam (Flat Worms, Mosquito, Gnat, Aphid), 90; Opaque Mounts (Beetles, Wings of Moths and Butterflies, Head of Fly, Foreleg of <i>Dytiscus</i>), 92; Memoranda (Including Directions for Mounting Other Forms), 93. | |
| CHAPTER XIV. BLOOD | 97 |
| Examination of Fresh Blood, 97; Effects of Reagents, 97; To Demonstrate Blood Platelets, 97; Stained Preparation of Fibrin, 97; Crystals of Blood, 97; Cover-Glass Preparations (Dry), 98; Rapid Method, 99; Enumeration of Blood Corpuscles, 99; Observation of the Blood Current, 101; Inflammation, 101; Memoranda, 101. | |
| CHAPTER XV. BACTERIA | 105 |
| Bacterial Examination, 105; Cover-Glass Preparation from Fluid Media, 105; Staining and Mounting, 106; Bacteria in Tissues, 107; Methylene Blue Stain for Bacteria in Tissues, 107; Gram's Method for Bacteria in Tissues, 107; Hanging-Drop Preparations, 108; Memoranda, 108. | |
| CHAPTER XVI. SOME EMBRYOLOGICAL METHODS: THE CHICK; SECTIONS AND WHOLE MOUNTS; OTHER FORMS | 113 |
| The Chick, 113; Series of Chick Embryos for a Course in Embryology, 115; Measuring the Length of Embryos, 116; Orientation of Young Chick Embryos, 116; Preparation of Material for the Embryology of Teleosts, 117; Preparation of Material for the Embryology of Amphibia, 118; Early Stages of the Mammalian Embryo, 119; Older Stages of the Mammalian Embryo, 120; Maturation, Fertilization, and Segmentation in Mammals, 121; Artificial Fecundation (Echinoderms, Amphibia, Teleosts), 122; Early Cleavage in Living Material, 123; Polar Bodies, Fertilization and Early Cleavage in | |

Ascaris (Sections), 123; Directions for Orienting Serial Sections, 123; Orientation of Objects in the Imbedding Mass, 124; Human Embryos, 126.

CHAPTER XVII. RECONSTRUCTION OF OBJECTS FROM SECTIONS . . . 127
 Reconstruction in Wax, 127; Geometrical Reconstruction, 129.

APPENDIX A. THE MICROSCOPE AND ITS OPTICAL PRINCIPLES . . . 133
 Optical Principles, 133; Images, 135; The Simple Microscope, 136; The Compound Microscope, 137; Defects in the Image, 138; Nomenclature or Rating of Objectives and Oculars, 144; Some Common Microscopical Terms and Appliances (Alphabetically Arranged), 145; Manipulation of the Compound Microscope, 157.

APPENDIX B. SOME STANDARD REAGENTS AND THEIR USES . . . 161
 Fixing and Hardening Agents, 161; Stains, 170; Normal or Indifferent Fluids, 187; Dissociating Fluids, 187; Decalcifying Fluids, 189.

APPENDIX C. TABLE OF TISSUES AND ORGANS WITH METHODS OF PREPARATION . . . 190

APPENDIX D. PREPARATION OF MICROSCOPIC MATERIAL FOR A COURSE IN GENERAL ZOOLOGY . . . 215

APPENDIX E. TABLE OF EQUIVALENT WEIGHTS AND MEASURES . . . 227
