## PREFACE.

IN view of the fact that we now appear to be on the verge of a practical solution to this classic problem of flight, I beg to submit to the engineering profession an epitome of the knowledge at present available on the subject. In the mathematical consideration I have adopted the principle, well established in engineering practice, of omitting those factors which appear to be unimportant. The formulæ are therefore "engineering formulæ" in the strict sense of the word, *i.e.* they are not the result of a deep mathematical analysis which it is, in the majority of cases, almost impossible to apply.

I sincerely hope that the rules, in conjunction with practical experiments, will prove useful, both before and after the new and more fortunate Icarus has flown from London to Manchester.

My thanks are cordially given to the individuals and firms who have supplied blocks for use in this book, *viz.*: Sir H. Maxim, *The Times (Encyclo. Brit.)*, Valentine and Thompson (*Travels in Space*), Electrical Power Storage Co., Adams Manufacturing Co., De Dion Bouton Co., Ltd., Baird & Tatlock, *Model Engineer*, and Cambridge University Press.

H. CHATLEY.

May 1907.

# CONTENTS.

## CHAPTER I.

### THE PROBLEM OF FLIGHT.

	PAGES
Causes of Progress in Aeronautics—Classes of Air-vessels—Dirigible Balloon— Heavier-than-Air Machines—Balancing . . . . .	1-8

## CHAPTER II.

### ESSENTIAL PRINCIPLES.

Nine Essential Principles—Chanute's Criteria . . . . .	4-5
--	-----

## CHAPTER III.

### THE HELIX.

Nature of a Helix—Thrust, Velocity, Weight and Power—Values of "w"— Helix Shafts—The Level Governor (Author's)—Thrust and Resistance— Position of Axis of Thrust—Vertical Helix—Types of Propellers—Con- struction of Helix . . . . .	6-25
--	------

## CHAPTER IV.

### THE AEROPLANE.

Resistance of Air—Wind Pressure and Inclination of Plane—Researches into Subject of Wind Pressure—Balancing of Aeroplane Systems—Stresses in Stays—Starting Aeroplanes—Angle of Elevation—Area . . . . .	26-48
--	-------

## CHAPTER V.

### AVIPLANES.

Flight of Insects and Birds—Researches of Pettigrew and Marey—Vertical Fans —Artificial Bird . . . . .	49-64
---	-------

## CHAPTER VI.

## DIRIGIBLE BALLOONS.

	PAGES
Equation of Motion—Ascensional Force—Resistance to Balloon—Electrical Machinery—Researches of Renard and Krebs . . . . .	65-74

## CHAPTER VII.

## FORM AND FITTINGS OF THE AIRSHIP.

Form of Minimum Resistance—Sine Curve—Author's Heliconef—Rudder—Motor and Fittings—Balancing—Stability—Oscillation . . . . .	75-100
--	--------

## APPENDICES.

<i>A.</i> Periodicity of Wing Flight . . . . .	101
<i>B.</i> Ratio of Wing Area to Weight . . . . .	102
<i>C.</i> Britain's Aerial Fleet . . . . .	102
<i>D.</i> A Flexible Wing . . . . .	103
<i>E.</i> The Maxim Flying Machine and Langley's Aerodrome . . . . .	104
<i>F.</i> Mathematical Theory of Balloon . . . . .	106-109
<i>G.</i> Recent Aeroplane Successes . . . . .	109-110
<i>H.</i> Langley's Experiments in Aeroplanes . . . . .	110-112
<i>I.</i> Longitudinal Stability . . . . .	112-113
<i>J.</i> Bibliography, Societies . . . . .	113-114

INDEX . . . . .	115
-----------------	-----

## LIST OF ILLUSTRATIONS.

FIG.	PAGE
Maxim's Aeroplane . . . . .	<i>Frontispiece</i>
1. The Helix . . . . .	6
2. "Antoinette" 100 H.P. Petrol Motor . . . . .	12
3. Helix Shaft, air only having transverse velocity . . . . .	13
4. Helix Shaft, showing vacuum action . . . . .	14
5. Balancing of two Helices . . . . .	14
6. Pendulum Level Governor . . . . .	15
7. Coincidence of Thrust, Centroid, and Centre of Pressure . . . . .	19
8. Vertical Air Wheel . . . . .	20
9. Elliptic Propeller . . . . .	22
10. Complete Helix of one Revolution . . . . .	24
11. Henson's Acrostat . . . . .	26
12. Resistance of Air . . . . .	27
12A. Bellamy Aeroplane . . . . .	30
12B. Delagrang's Aeroplane . . . . .	32
13. Aeroplane with Suspended Load . . . . .	39
14. Balance of Aeroplane System (two planes equally inclined) . . . . .	40
15. " " " (two planes unequally inclined) . . . . .	40
16. Engine of Maxim's Aeroplane . . . . .	41
17. Stresses in Stays of Aeroplane . . . . .	42
18. Resistance of Air to Curved Aeroplane . . . . .	43
19. Beetle in Flight . . . . .	49
20. Duck's Wing (left), ventral under view (without covert feathers) . . . . .	52
21. " " (right), dorsal view (without covert feathers) . . . . .	52
22. " " (left), dorsal view (with covert feathers) . . . . .	52
23. " " (right), dorsal view (with covert feathers) . . . . .	52
24. Butterfly in Flight . . . . .	53
25. Under and Side Views of Flapping Bird . . . . .	55
26. " " Soaring Bird . . . . .	56
27. Wing Cycle, according to Professor Pettigrew (modified) . . . . .	56
28. " " Professor Marey (modified) . . . . .	59
29. Elevation of Vertical Fan . . . . .	61
30. Plan of System of Vertical Fans . . . . .	62
31. Aviplane or Artificial Bird . . . . .	63
31A. Weiss Aviplane . . . . .	64
32. Method of setting out Balloon Sections . . . . .	68

## LIST OF ILLUSTRATIONS.

FIG.	PAGE
33. E.P.S. Accumulator . . . . .	70
33A. Count von Zeppelin's War Balloon . . . . .	73
34. Form for Prow of Airship . . . . .	76
35. Method of setting out Sine Curve . . . . .	77
36. Plan and Elevation of Suggested Hull . . . . .	78
37. Duplex Aeroplane, showing Equipoise . . . . .	79
38. Triplex Aeroplane . . . . .	79
39. Gyrostat . . . . .	81
40. Action of Rudders . . . . .	82
41. Change-speed Box . . . . .	83
42. Friction Clutch . . . . .	84
43. Petrol Motor Section . . . . .	85
44. Aneroid Barometer . . . . .	86
45. Anemometer . . . . .	87
46. Discharge through Orifices . . . . .	88
47. Lateral Stability of Aerostat . . . . .	89
48. Longitudinal Stability of Balloon (1) . . . . .	91
49. Longitudinal Stability of Balloon (2) . . . . .	91
50. Transverse Stability of Single-shaft Heliconesf . . . . .	92
51. Single-shaft Heliconesf with Lateral Pressure . . . . .	92
52. Section of Double-shaft Heliconesf . . . . .	93
53. Double-shaft Heliconesf displaced . . . . .	93
54. Lateral Balance of Aeroplane . . . . .	94
55. Curve of Static Stability . . . . .	96
56. Limiting Value of Static Stability . . . . .	97
57. Integration of Curve of Static Stability . . . . .	98
58. Flexible Artificial Wing . . . . .	103
59. Boiler for Maxim's Flying Machine . . . . .	105
60. Langley's Aerodrome . . . . .	107
61. Santos Dumont's Aeroplane, "The Bird of Prey" . . . . .	110

# FLIGHT.

## CHAPTER I.

### THE PROBLEM OF FLIGHT.

FOR ages men have been trying to achieve, by mechanical means, the feat (which is so easily accomplished by bird, bat, and insect) of flying. It is only within the last hundred years (unless of course we refer to Dædalus, who has omitted to leave working drawings and a recipe for mixing a good wax) that we have been able to hope that the problem would soon be solved. The chief causes which have led to this result are as follows:—

(1) A more thorough knowledge of applied mechanics, which has enabled us to cut down weights and sizes and yet to secure adequate strength.

(2) A reduction in the weight of prime movers and an improved quality of material, so that a small weight in machinery produces a very considerable power.

(3) A careful study of the flight of birds, wind pressure, and air propulsion.

All the difficulties are not yet solved, however, so that although we have now dirigible balloons and partially successful aeroplanes, there are problems still needing attention.

At the outset it must be understood that there are two classes of air-vessels:—

(A) Lighter than air.

(B) Heavier than air.

These are different in every respect, and for many years each type has had its staunch adherents, who were convinced that theirs and no other would be the final type in aerial navigation. As a
