PREFACE.

THE favourable reception accorded a series of articles by the author on electric-bell fitting which appeared in the 'English Mechanic' in 1887, induced him to issue them in book form. The fact that four editions have been rapidly exhausted is sufficient evidence that it has supplied a long-felt want, and in issuing this (the fifth) edition the author trusts that the revisions effected, and large amount of fresh matter that has been added, will considerably increase the value of the book.

To deal with the subject in an explicit and thoroughly practical manner has been the chief aim; while to avoid unnecessarily confusing those who glance through the book merely to get sufficient knowledge to enable them to do electric-bell work successfully, only such apparatus has been described as has after a thorough test been found reliable and is in use at the present time.

F. C. ALLSOP,

MANUFACTURING ELECTRICIAN.
