**THE ELEMENTS OF
HYDROSTATICS AND
HYDRODYNAMICS**

THE ELEMENTS
OF
HYDROSTATICS
AND
HYDRODYNAMICS.

BY W. H. MILLER, M. A.

FELLOW AND TUTOR OF ST. JOHN'S COLLEGE, CAMBRIDGE.

CAMBRIDGE:

Printed by J. SMITH, Printer to the University.

FOR J. & J. J. DEIGHTON, CAMBRIDGE;
AND J. G. & F. RIVINGTON, LONDON.

M.DCCC.XXXI.

CONTENTS.

SECTION I.

GENERAL PROPERTIES OF FLUIDS.....Page 1.

Art. 1. Definition of a fluid. 2. Of pressure. 3. Measure of pressure. 4. A fluid may become solid without disturbing its equilibrium. 5. Fluids press equally in all directions. 6. Equilibrium of forces applied to pistons. 7. Virtual velocities of the pistons are as the forces applied to them.

SECTION II.

ON THE EQUILIBRIUM OF NON-ELASTIC FLUIDS ACTED ON BY GRAVITYp. 4.

Art. 8. Definition of specific gravity. 9. Of density. 10. Relations between W, M, V, S, D, g . 11. The surface of equal pressure is a horizontal plane. 12. The pressure at any point. 13. The surface of a fluid is a horizontal plane. 14. The common surface of two fluids that do not mix is a horizontal plane. 15. When two fluids that do not mix, meet in a bent tube, their altitudes above their common surface are inversely as their densities. 16. The pressure of a fluid on any surface. 17. The centre of pressure of a plane surface. 18. The vertical pressure of a fluid on any surface. 19. The pressure estimated in a direction perpendicular to a given vertical plane. 20. Effect of pressure applied to the surface of a fluid. 21. The resultant of the pressure of a fluid on the surface of a solid immersed in it. 22. The conditions of equilibrium of a solid suspended in a fluid by a string. 23. The positions in which a solid can float in equilibrium. 24. The vertical oscillations of a floating solid. 25. Stable and unstable equilibrium. 26. Metacentre. 27. Oscillations of a solid in a vertical plane.

SECTION III.

ON THE EQUILIBRIUM OF ELASTIC FLUIDS ACTED ON BY GRAVITY.....p. 15.

Art. 28. The pressure of the atmosphere. 29. Correction for temperature. 30. Relation between the pressure and volume of air. 31. Ratio of the pressure to the density at 0° . 32. Ratio of the pressure to the density at any temperature. 33. Heat developed by compression. 34. Surface of equal pressure a horizontal plane. 35. The difference of the altitudes of two stations determined by the barometer. 36. The same, taking into account the variation of gravity. 37. Relation between the pressure and volume of vapour and gases.

SECTION IV.

ON THE EQUILIBRIUM OF FLUIDS ACTED ON BY ANY FORCES.....p. 22

Art. 38. The pressure at any point. 39. When the fluid is elastic. 40. The relation between the forces when the equilibrium is possible. 41. The direction of a normal to a surface of equal pressure. 42. Surface of equal pressure in an elastic fluid. 43. The conditions of (Art. 40.) satisfied by central forces. 44. The pressure arising from the mutual attraction of the particles of a fluid. 45. The surface of a fluid in a capillary tube concave or convex. 46. Capillary attraction is insensible at sensible distances. 47. The surface of a fluid in a vertical capillary tube. 48. The surface of a fluid between two parallel plates. 49. The tension of a cylinder containing fluid. 50. The tension of a vessel of any form.

SECTION V.

ON THE MOTION OF FLUIDS.....p. 34.

Art. 51. Velocities at different parts of the same tube. 52. The effective accelerating force in the direction of the motion. 53. The relation between the pressure and the velocity, when the velocity is independent of the time. 54. When the fluid is acted on by gravity only. 55. The relation between the pressure and velocity, when the velocity depends on the time. 56. The velocity at a small orifice. 57. The form of the issuing stream. 58. The time of emptying through a small orifice. 59. The velocity of a fluid issuing through a *finite orifice*. 60. When the vessel is kept constantly full. 61. When

the waste is not supplied. 62. The motion of a fluid in a tube. 63. The motion of a small disturbance. 64. Integration of $d_t^3y = a^2d_t^2y$. 65. The velocity of a small disturbance. 66. The velocity of sound.

SECTION VI.

ON RESISTANCES.....p. 46.

Art. 67. Definition of resistance. 68. The resistance on a plane perpendicular to the stream. 69. The resistance on a plane exposed obliquely to the stream. 70. The resistance on a cylindrical surface. 71. On a solid of revolution. 72. On a sphere.

SECTION VII.

DESCRIPTION OF INSTRUMENTS. METHODS OF FINDING SPECIFIC GRAVITIES.....p. 50.

Art. 73. Expansion by heat. 74. The thermometer. 75. The graduation of a thermometer. 76. The standard points. 77. The comparison of different scales. 78. The apparent expansion of mercury in glass. 79. The cubic expansion of a solid is equal to three times its linear expansion. 80. Bramah's press. 81. The diving bell. 82. Space occupied by the air in it. 83. The syphon. 84. The common pump. 85. The height through which the water rises at each stroke. 86. The range of the piston. 87. The range in a pump of uniform diameter. 88. The forcing pump. 89. The fire engine. 90. The condenser. 91. The density of the air in it. 92. The gauge. 93. Hawksbee's air pump. 94. The density of the air in it. 95. Smeaton's air pump. 96. The receiver. Valves. 97. The barometer gauge. 98. The syphon gauge. 99. The common barometer. 100. The comparison of the specific gravities of air and water. 101. The weight of a given volume of water. 102. The comparison of the specific gravities of a solid and of a fluid by weighing the solid in air and in fluid. 103. When the weight of the solid is less than the weight of the fluid displaced. 104. To compare the specific gravities of two fluids by weighing the same solid in each. 105. By weighing equal volumes of each. 106. To compare the specific gravity of a solid in fragments with that of a fluid. 107. The common Hydrometer. 108. Sikes' Hydrometer. 109. Nicholson's Hydrometer. 110. Meikle's Hydrometer. 111. Say's instrument for measuring the volumes of small solids. 112. The Piezometer. 113. The Hydraulic Ram. 114. The Atmospheric Steam Engine. 115. Watts' double acting Steam Engine.

APPENDIXp. 74.

Art. 116. Experimental proof that fluids press equally in all directions. 117. Pressure on any surface. 118—140. Examples. 141. Daniell's barometric formula. 142. Pressure of steam. 143. Expansion of water by heat. 144. Table of densities.

ELEMENTS OF HYDROSTATICS.

SECTION I.

GENERAL PROPERTIES OF FLUIDS.

ART. 1. A FLUID is a body which can be divided in any direction, and whose parts can be moved among one another by any assignable force.

Elastic fluids are those whose dimensions are increased or diminished when the pressure upon them is diminished or increased. Non-elastic fluids are those whose dimensions are independent of the pressure.

Water, mercury, and probably all other liquids, are in a small degree compressible. Their resistance however to compression is so great, that the conclusions obtained on the supposition of their being incompressible, are in most cases free from any sensible error.

2. Let DEF (fig. 1.) be a piston without weight exactly fitting an orifice in the plane ABC , which forms the side of a vessel containing fluid. It is manifest that the fluid can make no effort to move the piston in any other direction than that of a normal to its surface, the piston may therefore be kept at rest by a force applied at some point G in it, and acting in a direction HG perpendicular to DEF . A force equal and opposite to this is called the pressure of the fluid on DEF .

3. The pressure of a fluid at a given point is measured by the quantity p , $p\kappa$ being the pressure of the fluid on an indefinitely small area κ contiguous to the given point.

When the pressure of a fluid on a given surface is the same, wherever that surface is placed, p is the pressure on an unit of surface. When the pressure on a given surface, varies with the situation of the surface, p is the pressure which would be exerted on an unit of surface, if the pressure at each part of the unit of surface were equal to the pressure at the given point.
