PREFACE

WE give the following pages as a contribution to the treatment of the most difficult subject in medicine or surgery, not as a finished work. They comprise the result of nearly five years of experiment conducted on the same lines; and as we have in addition fifteen years of experiment in other directions, we know many of the difficulties the experimenter has to face. We have tried to keep to facts and have entered into no theories, though originally we did try to work from them. To avoid being too discursive we have not given all the cases we have treated, but have included all which appeared to give any information. The treatment is not suitable for all cases of cancer, and we hope that others will help us to discover which are the cases it is likely to cure and which should be attacked in some other way.
