## PREFACE.

---

In the following pages a general knowledge of the use of the ophthalmoscope, gained practically in the ophthalmic out-patient department of a hospital, is presupposed.

The optical explanation of the shadow-test, which would require illustrations for its elucidation, together with much theoretical and elementary detail, have been omitted with a view to make the book as practical as possible.

The treatment of ametropia, although touched on occasionally, is no part of the object in view.

W. M. B.
